medify

The Leader in
Human-Powered Connected Health

What if you could extend your team, your tech, and your insights to provide advanced care to the patients who need it most?

And your extended team pays you.

Super-Powering Your Practice

Four reasons Medify will improve your patient care and practice revenue:

1 Fully Managed Service

Medify adds wellness coaches, medical clinicians, and administrative staff under your practice's brand so you perform better and generate more revenue without added workload.

2 Seamless Integration

Add wearable devices, patient data, and call notes to your existing EMR with seamless integration. Your staff and patients don't need technical expertise.

3 Advanced Tech

Provide your patients advanced care through wearable devices, AI-driven analytics, and virtual human interaction that has proven to save lives.

4 Action-Driving Data

Set up data mining for proactive care, real-time data, and alerts to manage an emergency. All patient interaction notes are added to patient files directly in your EMR.

Proven Results in Patient Outcomes

- 50% reduction in CHF Hospital Re-admissions
- 25% decrease in All-Cause Hospitalizations
- 25% decrease in HbA1c
- 10 mmHG decrease in Systolic Blood Pressure

20% decrease in average cost of care
95% patient satisfaction / program retention

Cost and Revenue

- No cost to start
- Average $225,000 revenue increase per practice
- Incremental income of $700-900 per patient
- Practices start receiving billable encounter revenue within 120 days; Medify bills after practice is paid

Other Benefits

- Increase in office appointments
- Increase in patient engagement
- Increase in quality scores
- Practice receives 100% of incremental CMS MSSP payments

Driven by the Data

Medify strives to use advanced data analytics to improve patient health, including proactively mining data for:

- Identifying patients qualified for RPM and CCM
- Conducting detailed health risk assessments to inform personalized treatment plans
- Searching for trends and solutions to improve outcomes

- Recommending automated alerts for interventional care
- Recommending patient services
